AVi Association for
Veterinary
Informatics

Does your work help solve real problems for veterinarians?
Would you like the chance to present your research at an international, RACE-accredited conference?

For over 20 years veterinarians interested in achieving better health outcomes have met at the Association of Veterinary Informatics (AVI) Annual Talbot Informatics Symposium to share ideas that improve the quality and safety of patient care. We are seeking abstract submissions from students in the major areas of data in practice, veterinary healthcare information technology, and practical informatics to join us. Especially those able to speak around our major themes:

#BetterDataSavesPets: (Our symposium motto and hashtag)

Informatics in Practice: Evidence-based veterinary medicine, One Health, Practical workflow, Electronic health records, Epidemiology, Statistics, Data transmission, Effective data mining, Telehealth

The Backbone of Informatics: Standards and Interoperability

Veterinary Educational Technology: Leveraging technology for client education, client engagement, and professional veterinary education

If your work involves data management, practical workflow, electronic health records, epidemiology and statistics, data transmission, data mining, telehealth, interoperability, genomics, proteomics, or leveraging technology to educate and engage clients and veterinarians we want to hear from you!

Submit your abstract to student.programs@avinformatics.org by **May 3rd, 2020** for consideration for presentation at AVI's upcoming [Talbot Informatics Symposium](#) at the Fetch dvm360 Conference August 28-30, 2020. Conference registration is included and any additional travel expenses will be paid up to \$1200 (additional funds may be available for international students on a case-by-case basis).

#BetterDataSavesPets

Veterinary clinical informatics is a rapidly evolving science that improves the quality and safety of patient care by blending information technology, communications, social and behavioral science, and veterinary medicine. The AVI is a non-profit international and interdisciplinary organization comprised of individuals involved in biomedical informatics research, design, implementation, education and advocacy within the domain of veterinary medicine.

Become a member of our growing group of veterinary professionals interested in improving veterinary medicine by accessing actionable insights in clinical data! **Student membership is free.** Register today at <https://avinformatics.org/join-avi> to stay informed regarding networking opportunities, conferences, externships, and scholarships.
